

Bird Free Gel (BFG) is a harmless, safe and very effective pigeon control product used to deter feral pigeons and many other birds from roosting or nesting on buildings and other structures.

How it works

The Gel works by attacking the Optical and Sensory senses in birds – in simple terms; If you are a bird, it looks like FIRE and smells horrible.

Where can it be used?

- Under and around HVAC units
- Ledges / Beams / Underside of Canopies / Parapets /
- Window sills
- Light Poles
- Flat roof areas (i.e. side roofs and dormers)
- High rise garden installations

ADLER have trained installers to treat any commercial property throughout NZ.

ADLER BIRD FREE GEL YOUR PIGEON CONTROL SOLUTION

DAMAGE CAUSED BY PIGEON PROBLEMS

Pigeon control is important due to the damage and disease these problem birds often create.

The uric acid in pigeon droppings is highly corrosive and can cause extensive damage to metals, soft stone, painted surfaces and other substrates it sits on for long periods. Debris from flocks of problem pigeons often build up, backing up gutters and drains which can cause flooding and roof damage.
