

ADLER - BIRD FREE GEL CASE STUDY

250 Moorhouse Ave, December 2018

250 Moorhouse Ave, Christchurch, an old wool store building has long been a favourite for Pigeons. Tenanted by retail outlets, a Gym and other businesses – the pigeon infestation had become a real issue. Public areas were covered in droppings making them a slipping hazard and the smell was intense. The tower had been broken into by vandals and left open for several years – subsequently 70 – 80 pigeons had made it their home – a perfect CBD Pigeon aviary if you will.

The build up of excrement in this tower was several feet deep and had blocked guttering, the result was excrement laden water was leaking into the retail centre below.

The strategy was 2-fold;

1. Decontaminate the tower and secure it from future ingress.
2. Treat the exterior of the tower with Bird Free

The tower was cleaned up over a week with a specialist team wearing air-fed helmets and hazmat suits.

All Pigeons were relocated and the tower secured to prevent future entry.

The following images depict the exterior clean and installation of Bird Free Gel

These pictures show sections of the tower and roof before and during cleaning.

ADLER - BIRD FREE GEL CASE STUDY

The Bird Free Gel was installed in double rows on all landing zones around the perimeter of the tower.

ADLER - BIRD FREE GEL CASE STUDY

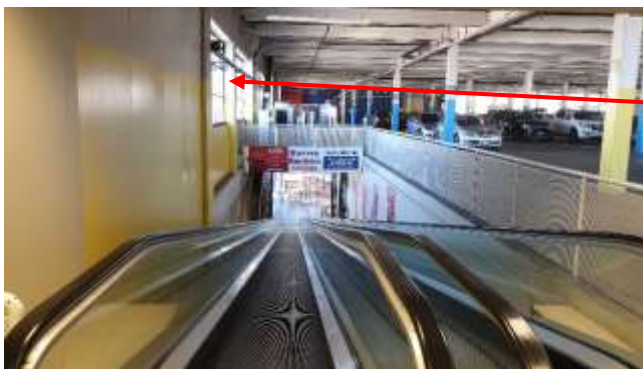

The tower has remained 100% free of Pigeons since the date of install – considering it was populated inside and outside with close to 100 pigeons every day this is true testament to the effectiveness of Bird Free Gel.

Other parts of the building including an internal car park have been since treated with Bird Free to continue the war on Pigeons and Sparrows.

Protecting spaces above a travelator that had to be cleaned regularly to remove bird strike.
