

OUR ENVIRONMENTAL POLICY

ADLER COMMERCIAL BUILDING WASH SERVICES (ADLER GROUP LTD) believe that businesses are responsible for achieving good environmental practice and operating in a sustainable manner. Our core business is exterior cleaning & it is our policy to conduct all activities with a high level of environmental care. We are therefore committed to reducing our environmental impact and continually improving our environmental performance as an integral and fundamental part of our business strategy and operating methods.

We encourage our suppliers and business associates to do the same. Not only is this sound commercial sense for all, it is also a matter of delivering on our duty of care towards future generations.

Our policy is to:

- Support and comply with - or exceed the requirements of current environmental legislation and codes of practice.
- We clean with hot water – which cleans faster so less water and less/no chemical is required
- Promote chemical free cleaning as our first approach to any building wash
- Minimise our waste and then reuse or recycle as much of it as possible.
 - i.e. Gutter cleaning and sump waste is generally 'Green Waste' and treated as such at refuse outlets
- Minimise energy and water usage in our buildings, vehicles and processes in order to conserve supplies, and minimise our consumption of natural resources.
- Apply the principles of continuous improvement in respect of air, water, noise and light pollution from our premises and reduce any impacts from our operations on the environment and local community.
- As far as possible purchase products and services that do the least damage to the environment and encourage others to do the same.
- Assess the environmental impact of any new processes or products we intend to introduce
- Work according to our environmental certifications, taking care to carry out all cleaning functions in an environmentally sensitive manner.
 - Using only as much water/pressure as required to sufficiently do the job
 - Installing filter cloth to stormwater catchments to catch dirt run-off

Supply Chain

NZ Manufacturers are our #1 choice for chemical and equipment supplies.

We choose chemical suppliers that are committed to creating high-quality products that are safe for the environment and our health. Where possible we use products that have the NZ environmental choice tick of approval.

Where possible, chemicals are purchased as Super Concentrates which use less packaging and have a lower carbon footprint overall.

R&D is improving the quality and efficiency of cleaning equipment all the time, we have designs to replace our equipment over time with 'Green Boiler' technology which offers the lowest emissions and the most fuel efficient pressure water heating system.

WE BELIEVE GREEN IS A JOURNEY – NOT A DESTINATION
